

Name of student: Zachary Milot

Date: June 7, 2012

Subject: Information Technology

Instructor's name: Walter Ramsey

Instructor's signature: _____

Answer the following with a minimum of 5 complete sentences. Be sure to use correct grammar and spelling.

1. Describe the assignment including the tools, process, and FCAs.

The assignment I had the honor to complete in my freshman year in Blackstone Valley Regional Vocational Technical High School was LabSim. This assignment consisted of 11 chapters with independent sections (6-8 sections per chapter). This was an honor to complete because it reviewed the CompTIA A+ Certification and gave extra knowledge that was not reviewed in my first 3 terms in the Information Technology shop. This also supported the learning material that we had inside of school and also added a practical look at what skills are needed for the A+ exam. This is an amazing opportunity to be able to support my knowledge with intuitive, realistic labs.

2. Write about what you have learned from this assignment. Describe the skills and competencies demonstrated by this assignment.

The things I have learned with the LabSim assignment are improved understanding of previously introduced topics and new topics like networking and printing skills

3. Evaluate your performance on the assignment. Identify what you did well and what could be improved.

On the LabSim assignment the things I did well on was the previously introduced material like form factors, power supplies, motherboards, processors, storage, memory, etcetera. The things that could have been improved are the networking component which was only briefly introduced in class and other things that have only briefly introduced.
